DETAILED ACTION

Response to Arguments

1. Applicant's arguments, with respect to the claims have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

Claim Objections

2. Claim 65 is objected to because of the following informalities: There appears to be an extra word "rate" after the word "substrate" in line 2. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 65 and 66 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. Claim 65 describes a device for generating ions comprising a non-porous substrate with a roughness. However, there is no embodiment to the claim to describe a method or apparatus using the porous substrate with certain roughness.

Allowable Subject Matter

4. Claims 1, 3-5,7-24, 26-31 and 34-64 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter. The Applicant filed an amendment received on December 19, 2003. In this amendment, Applicant amended claims 1, 5, 7, 20, 26, 27, 38 and 41, cancelled claims 2, 6, 25, 32 and 33 and added new claims 56-66. No new matter was introduced.

Regarding independent claims 1 and 56, a review of prior art failed to disclose or make obvious a method of producing an analyte ion comprising exposing a non-porous rough surface to a laser to produce an ionized gas phase analyte wherein the contacting of the analyte with the non-porous rough surface occurs in situ before and after exposing the non-porous surface to a laser.

Regarding independent claims 27 and 41, a review of prior art failed to disclose or make obvious a device or method for generating analyte ions comprising a non-porous rough surface with a surface roughness between about 2 nm and about 100 nm.

Regarding independent claim 61, a review of prior art failed to disclose or make obvious a device for generating analyte ions comprising a substrate having a non-porous rough surface having a surface area difference that varies from approximately 20% to approximate 40%.

Art Unit: 2881

Dependent claims 3-5, 7-24, 26, 28-31, 34-40, 42-55, 57-60 and 62-63 are allowable by virtue of their dependence upon claims 1, 27, 41, 56 and 61 respectively.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,854,486 to Dreyfus describes a device for generation of ions using a laser on a non-porous surface.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

8. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
